The school will introduce Ph. D students and post-doctoral researchers entering the field of nuclear astrophysics to some of the main topics of current interest. Lectures and problem solving sessions will address questions in:

- Cosmology
- Stellar evolution
- Supernova explosions
- Element production
- The weak interaction in astrophysics
- Experimental nuclear astrophysics
- Theoretical nuclear astrophysics

Lecturers:
- W. Hillebrandt, MPI
- C. Rolfs, Bochum
- I. Tkachev, CERN
- G. Martinez-Pinedo, GSI
- G. McLaughlin, North Carolina
- J. Blackmon, Oak Ridge
- C. Charbonnel, Geneva
- H. Schatz, Michigan State
- N. Mowlavi, Geneva
- P. North, Lausanne

Scholarships available:
